ENCYCLOPEDIA GALACTICA

By Dr. Marco Bltetto

ENCYCLOPEDEA GALACTICA

**Copyright © 2017
All Rights Reserved**

This ebook is both designed for and intended for there readership that are science and technology nerds. This ebook is about all things aerospace.

This ebook will prove to be a valuable reference book for decades to come.

This ebook was both written and intended for science, mathematics and technology nerds alike.

THE INVENTOR OF THE EDUCATOR

By

Dr. Marco Bitetto

The inventor of the educator was Nipinapus and he did this when he was fifteen years old.

He developed the educator. The educator

is a silver colored talking head that was able to see, hear, talk, think and learns by example.

He did this development in his garage and using components that were cannibalized from discarded electronics and vacuum cleaners alike.

THE INVENTOR OF THE COSMIC STRING POWER GENERATOR

By

Dr. Marco Bitetto

**The inventor of the
cosmic string power
generator was a five
year old boy named
Negipus and he lived in
the Beta Zeta stellar**

**system on a rocky
moon orbiting a
brownish grayish ringed
gas giant planet.**

**He and his family lived
in a floating house that
regularly orbited the
rocky moon and it was
totally solar powered.**

Negipus was able to build the galaxies first cosmic string power generator using parts that he bought from an online catalog and he paid for these parts with money from his ongoing stock investments.

You see, he was a kid with a 335 IQ and this

kind of thing was to be expected from him.

Most importantly, he was able to develop and get working this cosmic string electric power generator in only ten minutes.

Like all the other famous galactic

inventors, he never became rich off of his invention. Instead, all the others that mass produced and sold his inventions became multi-billionaires.

THE INVENTOR OF THE HYPER SPACE RADIO

By

Dr. Marco Bitetto

**Little known by others,
the sole inventor of the
hyper space radio was**

**n o n e o t h e r t h a n
Figamenpus a seven
year old kid.**

**H e d i d t h i s w h i l e
attending to his chores
at his parents home in
the mountain side area
of Olympus Mounds.**

**H e w a s a b l e t o d o t h i s
using parts that his**

friends and family gave him that they took off of broken electronics equipment.

It took Figamempus only fifteen minutes to develop the very first wrist watch sized hyper space radio.

THE INVENTOR OF THE T R A S H DISINTERGRATOR

By

Dr. Marco Bitetto

Now, the inventor of the trash disintergrator was none other than the eight year old Memipus. She was always interested in helping her

mother clean up the house and this was simply another natural out grown of that interest.

She did this from online parts that she bought with money that she earned baby sitting for several months.

THE INVENTION OF THE WARP DRIVE

By

Dr. Marco Bitetto

The invention of the warp drive was done by and ex-marine from the galactic military

services. Venipus was now one hundred twenty two years old when he invented the warp drive.

Hi lived on the ice planet of Io, located in the Sol stellar system.

THE INVENTION OF THE FEMTRON

By

Dr. Marco Bitetto

Few galactic citizens realize that the femtron was developed one thousand years about

by Bebipus who lived on an abandon derelict interstellar freighter and was totally powered using a network of fusion reactors and had a very primitive radio system that could only allow communication using Morse code. It's only means of sensing the space outside the ship were via the

circular view ports that were on the front and back of the freighter.

The freighter was painted black and had bright red company logos painted on the top, bottom and both sides of the freighter.

All the lighting of the freighter were provided

by arrays of high intensity LED's.

The freighters control computer was an electromechanical device the size of a typical large Earth house and was located in the rear of the freighter near the twelve plasma engines.

The freighter also had a primitive electronics laboratory and a store of electronic components and wires as well.

Using all these available resources Bebipus was able to construct and demonstrate the first

femtotron in only thirty five minutes. This was thanks to his super high 300 IQ and his highly dexterous three fingered hands.

Most interestingly, femtotrons are molecular sized electronic components that can act either as switches or as

amplifiers that can amplify input signals or input currents. Moreover, they are ultralow power users as well.

**THE INVENTION OF
THE FIRST
PROGRAMMING
LANGUAGE**

By

Dr. Marco Bitetto

The galaxies first every computer programming language was invented by none other than Xanapus seventeen million years ago. Few galactic citizens know this.

Xanapus was able to do this thanks to the Gridtonic computing box that his uncle left

him when he died thirty years ago.

Xanapus lives out of an animal fur based tent and he is totally nomadic and relies upon his surroundings to get both plants and large animals to eat using his crossbow based weapon and the collection of home

made arrows that are all equipped with Clogus points that are attached using tree sap and plant fibers to reinforce it to the carved tree branches that are used to make his collection of arrows. His arrows are held together in a discarded metal coffee can that Xanapus retrieved from his next

door neighbors garbage bin.

Xanapus's very first Gridtronic program took only five minutes to program and run. It ran flawlessly.

Xanapus's computer language consisted of logic based commands that were based upon

single collections of pictographic characters that were entered into the computer using a binary code that represented each and every one of these pictographic characters.

The Gridtronic box computer used power that come from a

tachyonic electric power generator.

Xanapus's wife put up with home for fifty years now and will most likely stay with him until either she dies or Xanapus himself dies.

Xanapus and his wife live in an abandon

collection of railway cars that have been connected to gether in a short period of time using tree sap from the surrounding treas.

Xanapus's electric power comes from a discarded old mini fusion reactor that was discarded by the local

patrolling military division.

THE INVENTION OF THE FORCE FIELD

By

Dr. Marco Bitetto

**Few galactic citizens
know who actually
invented the force field,
let alone how it works.**

The force field was invented by Fagapus about three hundred years ago in his research borrow that was located next to his home borrow underground.

You see Fagapus is a reddish furry long furred Fagathon being. These beings tend to be

extremely intelligent by very slow moving. They are vetitarians and the plants that they eat are loaded with plant toxins; hence, their slowness is a way that their body is able to rapidly remove the plant toxins from the body before the rest of the body uses all the plant

**b a s e d d i g e s t e d
ingredients.**

**All the electronic test
i n s t r u m e n t s t h a t
Fagapus used to test
and program his force
field projection device
were given to him by
friends and relatives.
Even the copper wiring
a n d e l e c t r o n i c
components were given**

**to him via broken
personal electronics
that he got from friends
and relatives. He was
able to desolder all the
components and wiring
using his MASER wond.**

**He was able to develop
the very first prototype
that was an actual vest
that was worn by the
user of the force field**

projector. Much later he managed to develop a wrist watch sized force field projector.

Shortly after he created these two prototypes, the galactic high government officials got wind of his activities and had his lab and home raided and all such items were

confiscated; since, they were deemed to be of galactic security sensitivity.

After a proper estimate from the galactic central accounting office, he received ten trillion credits on his supercomputer wristwatch account system.

At the receipt of this electronic transmission, Fagapus and all the beings of his community became boosum buddies instantly. Instantly Fagapus started getting requests from community beings for credits to help them with various things.

Fagapus, being the clever fellow he is, had a committee of elders formed to review and summarially reject every petition for credit assistance that come their way. This service cost Fagapus a minor two thousand credits per year. Of course on Fagapus's planet one

year is equal to thirty eight Earth months.

The end result was that Fagapus was sitting very pretty with a grin from ear to ear. You should note that Fagapus's ears are erected pointed projects that come out of the top of his head and can be independently

directionally moved at will.

THE INVENTION OF THE SPACE SHIP

By

Dr. Marco Bitetto

**The very first space
ship was developed
only a couple of
decades ago.**

This while Mimubupus was living in a space yacht that was powered by cosmic string based electric power generators (three of them in a redundant configuration).

Mimubupus's very first space ship was made up of carbon nanotubes that were naturally

found in the asteroid belt it self.

He build his very first space ship in only ten days.

This was thanks to both his dexterity and his super brilliant private school education. After

that he was totally self taught.

He then sold his first created space ship hull to none other then B e b i c o n p u s o f Bebiconpus Enterprises for a record 326 million credits. Not that he made a financial killing, simply he got properly a n d r i g h t l y

compensated for all the work he did.

THE INVENTION OF THE TRACTOR BEAM

By

Dr. Marco Bitetto

**Who would have ever
thought a loan so called
moron would have been
able to develop the
tractor beam aperatus
and out of an abandon
factory.**

Xenopus, invented the tractor beam when he was thirteen years. Incredibly enough, Xenopus actually had a 315 IQ. This was unbounced to everybody around him to.

**INVENTION OF THE
NANOBOTIC**

By

Dr. Marco Bitetto

**Only a few decades ago
Icapus invented the
nanobotic. He did this
while living in his
artificial orbital ring**

**world that is a physical
ring around the local
star itself and is totally
solar powered.**

**The nanobots that
Icapus invented were
assembled via the use
of a home made Atomic
Force Microscope. This
device not only
constructed the actual
parts of the nanobotic,**

it also both constructed the sensors, actuators, legs and neuromorphic brain of the nanobot itself.

Icapus was able to do this development in an incredible one hour and fifteen minutes. This is thanks to his two hundred IQ and his

home made atomic force microscope.

**HOME CONCOCKED
MEDICINAL BREWS**

By

Dr. Marco Bitetto

**I recently decided to try
a home concocked
medicinal brew that was
touted all over the web.**

The final verdict is that the concoction really doesn't work as advertised. Instead, any efficacy that it may have comes purely from the placebo effect itself.

The concoction is a mixture of one part organic honey and another part organic apple cider vinegar in

one 500 ml glass of water sturd vigorously.

At which point the trilayer premixture is brownish, goldinish and clear. After vigorous mixing, the concoction turns white.

The concoction tast like a rather acidic spoiled

apple cider in its fullest extent.

If you wish to try this concoction for yourself to determine its medicinal effectiveness as a weight loss beverage then go ahead.

**G A L A C T I C
EXPLORATION**

**By
Dr. Marco Bitetto**

**Few galactic citizens
know who explored the
galaxy.**

**Venipus explored the
galaxy at age two
hundred five. He used
an old stellartron based
hyperwarp drive**

starship that was the size of a yacht.

It took him one hundred years to explore each and every stellar system in the Milky Way galaxy.

When he came home, now one even came to shake his hand. Instead, he had a hill of

bills that were Leight being payed and had interest payments tacked on them.
